

Over the past 25 years, Beck-Automation has developed into a globally competent partner for the plastics processing industry, with removal robots and automation devices for injection molding systems. Regarding the integration of IML robots, we are one of the experienced, highly specialized companies on the market.

At Robobeck Unipessoal, Lda, a Beck-Automation subsidiary in Pousa, Barcelos, Portugal, we are looking for one specialist to complete the team:

Design Engineer (m/f) 100%

In this versatile task you will undertake new constructions and make developments in the field of plant engineering. You are also responsible for sub-projects from construction to commissioning. The creation of workshop drawings is as much a part of your future activities as the creation of detailed designs. This interesting challenge includes interdisciplinary cooperation with other departments, whereby customer and supplier contacts are not neglected.

Your requirement profile:

- Completed basic technical training, preferable with technical college degree in mechanical engineering
- Experience in 2D and 3D
- Good 3D CAD knowledge, an advantage with SolidEdge
- Fluent in English and knowledge of German is an advantage
- Independent and committed way of working

Our offer:

- Lively and modern environment as well as interesting and challenging tasks that you solve with personal responsibility
- Collegial and motivated team of engineers
- Careful induction and the opportunity to develop continuously
- Modern employment conditions

We look forward to your application documents, preferably by email, to our HR department:
